JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 175 1953

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron, when present, are included in the title; iron, when present, is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: " Iron–silicon–carbon alloys " and " iron–chromium–nickel–carbon alloys."]

Abrasives, lapping, 437
Adhesion, magnesite powders to surfaces, 329, 439
Africa, manganese-ore surveys in Gold Coast, 217 ; railways forging, 433
Ageing, carbide precipitates in, 447 ; effect on elasticity, 441 ; effect on hardness of Bessemer steel, 230 ; mechanical, 342 ; strain, 231 ; strain effect, 342 ; strain, of high-pressure tubing, 342
Air, drying for corrosion inhibition, 450 ; pollution by cupola, 86 ; pollution effect on corrosion, 234 ; pollution in foundry, 86 ; preheaters, 426 ; tubular heaters, 425
Aircraft Steel, boron steels for, 232 ; fatigue and creep testing, 92
Alloy Phases, A–BC ordered type, 448
Alloy Steel, carburized, austenite retention, 448 ; for chisels, 232 ; creep-resistant, developments, 93 ; determination of boron in, 349 ; determination of Mn and Cr in, 452 ; developments, 343 ; effects of alloy elements, 343 ; for forging, 344 ; heat-treatment, 445 ; identification, 452 ; materials consumption and production, 349 ; Overum, 445 ; production from Duffield iron, 331 ; replacement by boron steels, 232 ; sheet, furnaces for, 223 ; welding electrodes for, 436 ; welding machines, 435
Alloy Structure, 346
Alloys, aluminium–chromium fatigue, 93 ; copper–tin immersion plating, 439 ; iron–aluminium Wiedemann effect, 93 ; iron–aluminium–nickel A–BC-type phase, 448 ; iron–aluminium–nickel permanent magnets, 342 ; iron–carbon, ageing study, 447 ; iron–carbon, effects of elements, 444 ; iron–carbon, methane and hydrogen system with, 234 ; iron–chromium, chromium diffusion in, 438 ; iron–chromium heat-treatment effects, 234; iron–chromium oxidation, 94 ; iron–chromium solution potential after abrasion, 347 ; iron–chromium–carbon, equilibrium controlling decarburization, 264 (*Paper*) ; iron–chromium–nickel oxygen solubility, 443; iron–copper powder pump parts, 440 ; iron–manganese α and ε phases, 447 ; iron–manganese–nickel martensite transformation, 448 ; iron–nickel heat-treatment, 224 ; iron–nickel irreversibility, 346 ; iron–nickel thermal
Alloys—*continued*
conductivity, 442 ; iron–nickel transformations, 346 ; iron–nickel–carbon austenite stabilization, 346 ; iron–silicon recrystallization, 447 ; iron–silicon single-crystal domain patterns, 346 ; tin-zinc electrodeposition, 227
Alnico, structure effects, 342
Aluminium, coating-application methods, 91 ; determination in magnesite, 237 ; determination in presence of Fe, Ti, Ca, and Mg, 236 ; effect on brittle fracture and grain-size, 340 ; fatigue at high temperatures, 93 ; nitrogen elimination by, 444 ; shock-resistance testing, 341 ; sprayed, life, 348
Aluminium–Chromium Alloys, fatigue at high temperatures, 93
American Cast Iron Pipe Co., basic-cupola practice, 334
American Foundrymen's Association, sand-fineness test, 84
American Society for Engineering Education, research projects, 238 (*Book*)
American Society for Testing Materials, 1952 Book of A.S.T.M. Standards, 350 (*Book*)
Anaconda Copper Mining Co., copper precipitation by sponge iron, 331
Analysis, 94, 236, 348, 451 ; chromatographic determination and separation of Ti and Nb, 452 ; chromatographic inorganic, 452 ; chromatographic instruments, 451 ; colorimetric determination of aluminium, 236 ; electrographic, 94 ; electrolytic determination of copper, 236 ; errors statistics, 452 ; infra-red, of gas, 236 ; ion-exchange, 452 ; photocolorimetric determination of Mn. Cr, and V, 452 ; photometric determination of copper, 451 ; photometric determination of silicon, 236 ; photometric determination of titanium, 236 ; photometric, of iron and steel, 236 ; photometric, of steel, 237 ; polarographic determination of cadmium, 236 ; polarographic determination of copper, 236 ; polarographic determination of Mn and Fe, 348 ; polarographic determination of tin in plating solutions, 348 ; polarographic square-wave, 451 ; polarographic, of steel, 349 ; potentiometric equivalence point, 451 ; precipitates ageing in, 452 ; radio-activation determination of carbon, 236 ; radio-
Analysis—*continued*
activation, of iron, 237 ; reagents selectivity, 451 ; spectrochemical apparatus, 236 ; spectrochemical determination of lead, 451 ; spectrographic D.C. arc ignition, 348 ; spectrographic determination of cadmium, 236 ; spectrographic determination of magnesium, 451 ; spectrographic laboratory, 451 ; spectrographic, of oils for metals, 451 ; spectrographic, of tungsten steels, 451 ; spectrometric γ-ray, 236 ; spectroscopic determination of oxygen in steel, 450 ; spectroscopic, by Macq-Electronique, 452 ; spectroscopic, of steel, 450 ; spot reagents, 451 ; titrametric, 348 ; 349 ; X-ray apparatus, 446 ; X-ray, calculation aids, 446 ; X-ray fluorescent, 236, 349, 452 ; X-ray, procedures, 446 ; X-ray, symposium, 446
Analysis of, gas by infra-red, 236 ; gas by Orsat, 349 ; iron and steel by photometry, 236 ; magnesite by spectrochemistry, 452 ; silicates, 349 ; slags, 237 ; steel by photometry, 236, 237 ; steel by polarography, 349 ; steel by spectroscopy, 450, 452 ; tungsten steels by spectrography, 451 ; zinc by spectrometer, 450
Analysis Methods, conference, 239 (*Book*)
Annealing, continuous line, 431 ; hydrogen effect in, 444 ; malleable iron, effect of furnace atmosphere, 83 ; stress-relief, of welds, 436 ; welded boiler seams, 433
Annealing Furnaces, elevator-type, for blackheart, 429 ; instrumentation, 433; radiant-roof, 433
Appleby-Frodingham Steel Co., Footner process, 227 ; ironmaking with high-sinter burdens, 241 (*Paper*) ; rail and plate rolling, 225 ; sintering-rate trials, 97 (*Paper*) ; sintering research, 155 (*Paper*)

Commonwealth Steel Co., oxygen refining in arc furnace, 333

Compressed Air, compressor-disc forging, 433 ; compressors stress-relief furnace, 433 ; in foundry, 335 ; in risering, 335

Concrete, blast-furnace slag as aggregate, 331 ; refractory, in blast-furnace bottoms ; refractory, for open-hearth flues, 80 ; refractory, for open-hearth flues and checkers, 81

Consett Iron Co., Ltd., rolling mills, 434

Continuous Casting, in foundry, 335 ; rod, cooling calculations, 335

Converters, bottom-blown, refining in, 79 ; metal tuyeres, 331 ; mill-scale additions, 80 ; oxygen-blast recording, 79 ; oxygen blowing for desiliconization, 79 ; oxygen refining in, 79 ; oxygen/steam blowing, 79

Conveyors, blast-furnace charging by, 409 (*Paper*), 427 ; equipment, 339 ; in moulding, 84

Cooling, of continuous-cast rods, 335

Copper, deformation in rolling, 447 ; determination in cast iron by internal electrolysis, 236 ; determination with iron, 451 ; determination by photometry, 451 ; determination by polarography, 236 ; determination by spectrometer, 450 ; effect on nodular-iron ductility, 345 ; effects in powder iron, 229 ; precipitation by sponge iron, 331

Copper–Manganese Steels, for rolling stock, 345

Copper Steel, determination of phosphorus in, 450

Copper–Tin Alloys, immersion plating, 439

Coremaking, 430 ; time study by motion pictures, 85

Cores, baking by induced flow, 84 ; baking study, 85 ; binder-materials chemical properties, 430 ; drying in electric stove, 430 ; drying in tunnel stove, 430 ; finishing standard-data tables, 85 ; pelleted pitch for, 430 ; sand preparation, 430 ; sand time/temperature effects, 430 ; synthetic-resin, 430 ; veining in, 85 ; venting, 430

Corrosion, 94, 234, 347, 448 ; bacterial, of cast iron, 234 ; bacterial, literature review, 234 ; bacterial, of pipelines, 234 ; boiler, through faulty firing, 348 ; boiler, prevention, 235 ; boiler tubes, 450 ; of buried cable sheaths, 347 ; cast iron by bacteria, 234 ; cast iron by sulphur, 235 ; chemical-plant, 347 ; of chromium, 235 ; costs and control, 449 ; data graphical treatment, 449 ; design of exposed systems, 235 ; diffusion study by electric analogues, 347 ; effect of temper brittleness, 235 ; effects of climate and air pollution, 234 ; electrochemical-behaviour aspects, 449 ; in engineering, 348 ; fatigue, effect of cyclic stresses, 235 ; fatigue electrochemical mechanism, 235 ; fatigue limit, 235 ; in fire extinguishers, 450 ; fretting, cause and prevention, 449 ; fretting, studies, 449 ; of fuel-injection nozzles, 235 ; of galvanized water tanks, 348 ; heat-resistant steels by V_2O_5, 450 ; inhibition, 347 ; inhibition by dried air, 450 ; inhibition by sodium benzoate and sodium nitrite in anti-freeze solutions, 234 ; inhibition by tannates and phosphates, 234 ; inhibitors in neutral solutions, 347 ; intercrystalline, effect of temper brittleness, 235 ; intergranular, Strauss test, 348, 450 ; by liquid metals, 234 ; literature review, 448 ; marine, of metal-coated steel, 449 ; marine-fitting research, 347 ; marine, protection, 449 ; marine, testing at Kure Beach, 448 ; mild steel and brass in chlorinated water, 234 ; in oil tankers, 348, 450 ; oil-well laboratory study, 235 ; over-passivation in oxidizing media, 450 ; passivation of iron, 347 ; passivation layer in Fe–Cr alloys, 347 ; passivation and polarization in, 347 ; passivation of stainless steel in H_2SO_4, 450 ; passivation of stainless steel by potassium dichromate, 234 ; passivity, effects of magnetic and sonic fields, 94; protection, 347 ; protection in marine conditions, 449 ; protection by metallic and non-metallic coatings, 381 (*Paper*); protection by paints, 449; protective measures, 234 ; reprints on, 238 (*Book*) ; research in Belgian institute, 449 ; rust. *See* Rust ; soil, inhibition by tannates and phosphates, 234 ; stainless steel in chromic acid, 235 ; stainless steel in oxidizing solutions, 235 ; in steam-condensate systems, 235 ; steam-jet linings for, 348 ; stress-cracking inhibition by Al, Ti, and Ni–Ti, 449 ; stress cracking by liquid zinc, 450 ; stress, testing, 449 ; stress transgranular, in chromium–nickel stainless steels, 390 (*Correspondence*) ; test record cards, 348 ; test for sheet steel, 348 ; testing, 448 ; testing, rotor-techniques, 450 ; testing by Strauss method, 348, 450 ; tests statistical analysis, 236 ; titanium and titanium alloys, 450 ; by V_2O_5, 450 ; waterline, 94 ; of zinc and zinc coatings, 449

Corrosion Cracking, stress, inhibition by Al, Ti, and Ni–Ti, 449 ; stress, by liquid zinc, 450

Corrosion Resistance, chromium plate, 438 ; impregnated powder parts, 440 ; nodular iron, 348 ; steels in nitric acid, 450

Cracks, caustic, in boilers, 234, 235 ; caustic, test for boilers, 234 ; corrosion. *See* Corrosion Cracking ; detection by automatic recorder, 442; detection by dyes, 442 ; detection by magnetic coil, 442 ; detection by magnetics, 441, 442 ; failure by, 92 ; hot, in welds, 339 ; recording by lacquer solution, 442 ; weld, hot, 339 ; welding C.T.S. test, 435 ; welding, in Cr–Mn–Si steel, 226 ; welding, effect of chromium loss, 89 ; in welding tests, 343

Cranes, electric overhead travelling, central greasing station for, 419 (*Paper*) ; foundry, 226 ; ladle, 88 ; ore-bridge, electrical equipment, 217 ; radio control, 434

Crankshafts, forged, billet-heating furnaces, 223 ; forging, 86 ; forging plant, 337

Creep, of cast steels, 442 ; of Cr–Ni steels, 343 ; high-temperature, 443 ; in high-tensile wire, 442 ; resistant-steels developments, 93 ; of steam-plant steels, 343 ; of structures, 229 ; theory, 343

Creep Tests, on aircraft materials, 92 ; by cantilever bending, 442 ; compressive high-temperature machine, 442 ; tensile constant-stress maintenance, 442

Crucible Steel Co., furnaces for alloy-steel sheet production, 223 ; monolithic furnace spouts, 428 ; open-hearth flue cleaning by steam jet, 428 ; open-hearth instrumentation, 82

Crystallization, in nodular iron, 429

Cupola, acid and basic costs comparison, 221 ; air preheating, 221 ; all-scrap melting, 335 ; balanced-blast, 428 ; basic, practice, 83, 334 ; basic refractories, 83 ; blast-volume control, 334 ; blast-volume measurement, 335 ; bottom-refractories control, 83 ; carbon refractories, 78 ; charging practice, 428 ; coke, 221 ; combustion diagrams, 221 ; combustion equations, 334 ; combustion process in, 221 ; combustion reactions in, 334 ; design and operation, 334 ; desulphurization in, 221 ; dimensions and performance, 428 ; duplexing with air furnace, 83 ; dust count, 86 ; effect of bed height on carbon content, 83 ; flake-graphite-free grey-iron production in, 335 ; fluorite and silicon additions, 336 ; heat balance, 221 ; heat balances with cold and hot blast, 221 ; hot-blast, 334 ; hot-blast, combustion ratio, 221; Mayer melting process, 335 ; metal mixer for, 82 ; oxygen-enriched air, 221 ; oxygen injection in forehearth, 334 ; refractories ramming, 335 refractories spraying, 335 ; tap-hole botting, 428 ; tar/dolomite lining, 335 ; twin self-cleaning tuyeres, 335

Cutting, abrasive-belt, 90 ; deformation in, 436 ; flame. *See* Flame Cutting ; sheet by automatic machine, 88

Cutting Tools, anodic polishing, 437 ; carbide, 340 ; carbide tips, 90 ; machining by electric spark, 90 ; wear study by radio-isotopes, 436

Czechoslovakia, bentonite preparation, 222 ; hot-strip rolling, 338

Damping, in ferromagnetic alloys, 231

Decarburization, carbon diffusion-constant relations in, 232 ; controlling equilibrium in iron–chromium–carbon melts, 264 (*Paper*) ; Fe–C alloys by slags, 83 ; iron plate, 232 ; silicon sheet at Panteg, 432 ; steel, effect of rate on quality, 220

Deep Drawing, lubricants, 87

Deformation, crystal growth in dislocations, 233 ; in cutting, 436 ; dislocation multiplication processes, 229 ; dislocations in arbitrary intercrystalline boundaries, 229 ; dislocations-density determination, 447 ; dislocations origin, 229 ; dislocations and plastic flow in crystals, 454 (*Book*) ; displacements theory, 233 ; grain-boundary dislocation models, 229, 233 ; lamellar slip, 229 ; phase-transformation, 447 ; plastic, of cast iron in forging dies, 337 ; plastic, determination by wire tensometers, 92 ; plastic flow, 229 ; plastic, internal stresses in, 342 ; plastic, relation with internal friction, 93 ; plastic, symposium, 229 ; rate effect on yield of sheet steel, 440 ; rolling, X-ray studies, 447 ; screw dislocations, 346 ; of single-crystal ingot iron, 447 ; slip in body-centred cubic single crystals, 229 ; slip dynamics, 233 ; structures in face-centred cubic metals, 229 ; toughening by, 234 ; twinning in Charpy specimens, 440 ; vacancies generation by dislocations, 233

Degreasing, tests sensitivity, 437

Deoxidation, in open-hearth, 81 ; of steel, 220 ; treatment in relation to slag inclusions, 82 ; by vanadium slags, 332

Department of Scientific and Industrial Research, English Liassic ironstones, 239 (*Book*)

Descaling, cold-rolled strip, 338 ; hydraulic, of hot steel, 437 ; machine, for 437 ; shot-blast machine for, 437 ; sodium hydride, 437 ; stainless strip, 437

Desiliconization, iron in ladle by oxygen jet, 330 ; pig iron by pouring through slag, 220

Desulphurization, in cupola, 221 ; electric furnace for, 333 ; iron by acid slags, 330 ; pig iron by ground lime, 80 ; pig iron by lime injection through tuyeres, 330 ; pig iron by pouring through slag, 220 ; skimming of soda slags, 51 (*Letter*) ; slags capacity in, 79 ; in steelmaking, 332

Die Casting, 85 ; die protective coatings, 85 ; pressure, 431 ; steels selection, 85

Dies, Cr–Mn–W steels for, 232 ; cold heading, carbide, 434 ; drawing, internal-inspection method, 338 ; progressive forming, 337 ; progressive, for telephones, 87 ; steel heat-treatment, 232, 344 ; steels selection, 344 ; wire-drawing, profiloscope, 434 ; wire-drawing, sintered carbide, 338

Diesel Engines, carburization plant, 86 ; grey-iron castings, 335 ; for shunting, 226

Diffusion, in austenitic alloys, 448 ; carbon in austenite, 345 ; carbon, effect on inclusions, 346 ; chromium in Fe–Cr alloys, 438 ; in corrosion, 347 ; heat-treatment nomogram, 86 ; solid-state study, 233

Dolomite. *See* Refractory Materials

Models, blast-furnace, in carbon-hearth study, 79, 219 ; coke-oven, for heat-flow tests, 218 ; open-hearth, flow

Models—*continued*
patterns, 427 ; open-hearth, for natural-gas firing studies, 82 ; reheating-furnace, 86
Moisture, effect on coal combustion, 425 ; relations in clays, 429
Molybdenum, determination by photometry, 236 ; identification in minerals and alloys, 451
Molybdenum Disulphide, as fretting-corrosion inhibitor, 449
Molybdenum Ore, reserves, 217
Molybdenum Steel, welding electrodes, 436
Morse Chain Co., Ltd., chain heat-treatment, 223
Moulding, conveyor-line time standards, 84 ; factors in, 222 ; investment, 223 ; shell, 223 ; shell, advantages and uses, 222 ; shell, automatic machines, 85 ; shell, low-cost machine, 85 ; shell, patents position in Britain, 431 ; shell, patents review, 222 ; shell, practice, 431 ; shell process, 222, 431 ; shell, resins for 222 ; shell, resins and sands for, 85 ; shell, for U.S. Navy, 431
Moulding Machines, shell, low-cost type, 85 ; for shell process, 85
Moulding Sand, bentonite, 222 ; bentonite testing, 222 ; bonding, 84 ; cement, test-methods, 222 ; coal-dust and pitch additions, 430 ; conservation, 222 ; deformation, 84 ; fineness test, 84 ; metal penetration, 83 ; metal penetration, effect of ramming and sintering, 19 (*Paper*) ; moisture-content effect on dust, 222 ; olivine, 84 ; preparation for cores, 430 ; properties, effects of binders and additives, 84 ; properties at high temperature, 84 ; properties and use, 222 ; ramming, 84 ; reclaimed preparation, 222; scabbing relations, 84 ; for shell moulding, 85 ; sticking prevention, 430 ; synthetic, 430 ; synthetic, practice, 223 ; synthetic-resin, 222 ; testing fineness, 84 ; zirconite, 222
Moulds, box requirements, 430 ; box standards, 430 ; Croning, machine for, 85 ; Croning, registering, clamping, etc., 431 ; fireclay box, 430 ; fluidity-test, 85 ; ingot. *See* Ingot Moulds ; pelleted pitch for, 430 ; sand, drying study, 85 ; sand, effect of resistance on castings stress, 429 ; sand and loam, cracking in, 430 ; sand, venting, 430 ; stripping machines, 431 ; synthetic-resin, 430
Mullite. *See* Refractory Materials

National Bureau of Standards, welded-ship failure research, 436
National Tube Co., extruding stainless tubes, 434 ; extrusion by Ugine process, 225
Nederlandsche Chemische Vereeniging, X-ray analysis symposium, 446
Nickel, clad-steel welding, 89 ; conservation, 443 ; deformation in rolling, 447 ; determination by photometry, 236 ; effect on O solubility in Fe–Cr–Ni alloys, 443 ; effects in Cr–Mo and Cr–Mo–V steels, 444 ; internal friction, 93
Nickel Alloys, identification, 452
Nickel Ore, reserves, 217
Nickel Plating, peeling in, 438 ; properties, 90
Nickel-Plating Solutions, determination of boric acid in, 348 ; types, 90
Niobium, determination with Ti by chromatography, 452
Nitric Acid, corrosion resistance in, 450
Nitrides, thermodynamics in iron and steel, 52 (*Paper*)
Nitriding, carbo, batch equipment, 433 ; carbo, by carburization, 86 ; carbo, practice, 433 ; carbo, reactions, 224 ; discontinuities at ferromagnetic Curie point, 234
Nitrogen, determination by photometry, 236 ; effect on blue brittleness, 444 ; elimination by aluminium, 444 ; take-up in Fe–V wire, 343 ; thermodynamics in iron and steel, 52 (*Paper*)
Nodular Cast Iron, castings specifications, 445 ; composition relation with properties, 233 ; cooling curves, 222 ; corrosion resistance, 348 ; crystallization in, 429 ; ductility, 345 ; effect of silicon, 232 ; effect of silicon on impact properties, 345 ; effects of nodular-graphite content, 233 ; effects of residual elements, 232 ; electrical resistance, 93 ; ferrosilicon additions, 222 ; graphite formation, 221 ; graphite separation in cooling, 222 ; graphite spherulization, 83 ; heat resistance, 348 ; heat-treatment, 222, 432 ; heat-treatment effects, 233 ; large castings, 83 ; magnesium-inoculation assessment by fracture test, 222 ; magnesium–nickel type, 232 ; production experiments, 431 ; properties, 233 ; properties and applications, 445 ; rolls, 445 ; shock-resistance testing, 341 ; wear properties, 445
Noise, effect on ore miners, 327
Non-Destructive Testing, of ancient objects, 349 ; of castings, 93 ; economics of, 442 ; methods, 343 ; symposium, 442 ; of thin shells, 442
Non-Metallic Inclusions, determination methods, 236
Nucleation, martensite, 346, 447

Obituary Notices, 72, 214, 323, 421
Oil, determination of metals in, 451 ; refining for re-use, 435 ; vanadium-containing, corrosion by, 450
Oil Wells, corrosion study, 235 ; pump-rod stresses, 341
Open-Hearth Furnace, all-basic, 333; all-basic in Britain, 220 ; automatic control, 332 ; automatic control at Shotton, 80 ; bath and slag oxidation, 332; bottom ramming, 81 ; bottom ramming with magnesia, 81 ; burner construction, 331 ; charging-machine wheel pressures, 88 ; charging system, 81; checker maintenance, 80 ; checker refractory concrete, 81 ; costs comparison with electric furnace, 333 ; design for natural-gas firing, 82 ; draught production, 332 ; fantail plastic refractories, 80 ; fantail ramming, 80 ; fettling machine, 333 ; firing with coke-oven gas, 80 ; firing with gas-atomized oil, 82 ; firing with liquid/gas fuel mixture, 81 ; firing with mixed fuels, 81 ; firing with natural gas, 82 ; flow-pattern studies, 331, 427 ; flue cleaning by steam jet, 428 ; flue construction with refractory concrete, 80, 81 ; heating with coke-oven tar, 331 ; heating with fuel oil, 331 ; heating-up rates, 220 ; heating-up after rebuild, 427 ; hot iron for, 332 ; instrumentation, 82, 220 ; iron ore for, 82 ; lime replacement by limestone in charge, 82 ; Maerz-type, 333 ; model studies, 82, 427 ; oxygen economics, 81 ; oxygen lancing, 80 ; oxygen practice, 80 ; oxygen refining of high-phosphorus pig in, 332 ; plastic refractories, 80 ; practice in Russia, 428 ; productivity-increasing practices, 333 ; rapid-melting practice, 332 ; rapid-melting practice in Russia, 332 ; refractories, 80, 81, 427 ; refractories testing, 329 ; regenerator conditions, 81 ; repair acceleration at Corby, 81 ; repair and maintenance in cold-metal practice, 59 (*Paper*), 66 (*Discussion*) ; repair and maintenance in hot-metal practice, 64 (*Paper*), 66 (*Discussion*) ; repair organization, 82 ; replacement by electric furnaces, 220 ; roof-temperature measurement by photoelectric pyrometers, 218 ; sample conveyor to laboratories, 451 ; scrap preparation, 80 ; slag control by lime, 81 ; slag-pocket cleaning by blasting, 428 ; tapping-practice effect on steel quality, 428 ; temperature control, 77 ; tilting coke-oven-gas fired, 332 ; in U.S.A. and Germany, 80 ; uptake dimensions effect on performance, 82 ; zebra roofs, 427
Open-Hearth Models, flow-pattern study, 427 ; natural-gas firing study, 82
Open-Hearth Process, alloy additions in ladle, 81 ; boron addition, 81 ; comparison with basic Bessemer process, 331 ; deoxidation, 81 ; flame radiation and emissivity continuous measurement, 359 (*Letter*) ; flame-radiation experiments, 177 (*Paper*) ; iron ore in, 82; manganese conservation, 81 ; melting-shop expansion without production delay, 331 ; pig-iron charge increasing 81 ; reactions comparison with arc furnace, 333
Open-Hearth Slag, control by lime, 81 ; determination of manganese in, 236 ; inclusions in rolled acid steel, 334 ; manganese recovery from, 331 ; removal from pockets, 428
Ores, dressing study by radio-isotopes, 327; evaluation by specific gravity, 328 ; flotation reactions, 328 ; heavy-media separation, 75 ; mining economics, 75 ; mining and treatment, 75, 217, 327, 425

Tubes, aluminium-alloy, plasticity, 342 ; autofrettage in, 229 ; billet piercing for 225 ; centrifugally cast, 444 ; extruded, abrasive-belt grinding, 90 ; extrusion by Ugine process, 87 ; flame cutting, 226 ; frictional resistance of, 453 ; high-temperature, effect of phosphorus, 443 ; narrow, production, 89 ; production by cold rolling, 225 ; production by Mannesmann piercing, 225 ; sinking-force calculation, 232 ; stainless, extrusion, 337, 434 ; stainless, flash welding, 435 ; strain ageing,

Tubes—*continued*
342 ; testing by ultrasonics, 231 ; upsetting, 87 ; welded, defects, 226 ; welding, 226 ; welding in manufacture, 340
Tungsten, welding electrodes, 88
Tungsten Carbide, hard facing with, 91 ; inserts in heading dies, 434
Tungsten Ore, reserves, 217
Tungsten Steel, analysis by spectrography, 451
Turbines, blade-steel elastic modulus, 443 ; casings thermal distortion, 443 ; cavitation laboratory, 347 ; Cr–W–V steels for, 444 ; cylinder casting, 431 ; impeller-stress analysis, 342 ; starting and loading, 225

Union Steel Corporation of South Africa, gas-producer plant, 426
United Nations Organisation, investment costs for steelmaking processes, 94
United States, bacterial-corrosion research, 234 ; blast-furnace refractories, 78 ; blooming-mill comparisons with Europe, 338 ; boron-steel progress, 444 ; brittle-fracture research, 91 ; cold extrusion, 434 ; forging developments and prospects, 337 ; heavy presses, 337 ; iron-ore deposits, 327 ; iron-ore geology, 217 ; iron and steel industry, 349 ; iron and steel works lighting standards, 95 ; metallurgical research, 94 ; open-hearths compared with Germany, 80 ; steel production capacity, 453 ; taconite mining, 217
United States Air Force, heavy presses for, 337
United States Bureau of Mines, manganese recovery from open-hearth slag, 331
United States Navy, plastic-deformation symposium, 229 ; shell moulding, 431 ; welded-ship failure research, 436
United States Steel Co., blast-furnace blowing-in after banking, 427 ; blast-furnace-gas cleaning at Donora, 330 ; boron addition, 81 ; coke blending with low-volatile coals, 79 ; immersion pyrometry, 77 ; open-hearth oxygen lancing, 80 ; open-hearth rammed bottoms, 81 ; open-hearth refractory concrete, 80, 81 ; roll lathe, 225 ; sinter sampling, 328 ; slabbing-mill drives, 225 ; stainless-tube extrusion at Gary, 337 ; steelmaking-terms handbook, 237 ; tube-extrusion plant, 87,
United Steel Companies, Ltd., sinter test unit, 159 (*Appendix*)

Vacuum Melting, 446, of Cr steels ; 446 ; furnace for, 446 ; titanium and zirconium, 446
Valves, die forging, 337 ; steels for, 443
Vanadium, determination by photocolorimetry, 452 ; phases in acid slags, 332
Vanadium Ore, reserves, 217
Vanadium Pentoxide, corrosion by, 450
Vancouver Steel Co., Ltd., mullite electric-furnace roofs, 428
Ventilation, foundry design and maintenance, 86
Vereinigte Oesterreichische Eisen und Stahlwerke, A. G., slag-wool production, 331 ; tilting open-hearth, 332
Viscometers, rotary type for slags, 82

Waste Liquors, classification and reclamation, 95 ; disposal, 437 ; phenolic, disposal, 426 ; steelworks, treatment, 95; water treatment, 237
Water, chlorinated, corrosion in, 234 ; waste, treatment, 237
Water Tanks, galvanized domestic, corrosion, 348
Wear, automobile-cylinder testing, 88 ; of bearing retainers, 232 ; conference on, 239 (*Book*) ; effect on case-hardened structures, 345 ; fragments welding in, 441 ; of grinding wheels, 90 ; of nodular iron, 445 ; of rails, 444 ; in refractory machinery, 219 ; solution potential of Fe–Cr alloys after, 347 ; study by radio-isotopes, 441
Wear Winch and Foundry Co., Ltd., diesel-engine castings, 335
Weld Metal, alloying-elements transfer, 89; austenite decomposition in, 346 ; impact tests, 226
Weldability, armour steel, effect of flame cutting, 89 ; boron steels, 344 ; effect of brittle fracture, 340 ; high-tensile steels, 339 ; 435 ; structural steel, 339 ; thin rimming-steel sheet, 89
Welded Assemblies, pipe formation in, 435 ; stud fatigue strength, 435
Welded Structures, cooling stresses, 436 ; distortion in, 89 ; notch-bar tests, 440 ; steels for, 444 ; stress relief, 433 ; stress-relief furnace, 433
Welding, 88, 226, 339, 435, 455 (*Book*) ; alloying-elements transfer in, 89 ; arc atmospheres, 88 ; arc, of cast iron, 435 ; arc, slag/metal interactions, 339; argon-arc, gases from, 435 ; blast-furnace shells, 89 ; boilers, 226 ; brittle fracture in, 92 ; cast-iron, arc process for, 435 ; Cr–Ni steels, 339 ; distortion in, 89 ; flash, of stainless tubes, 435 ; flash, temperature distribution in, 226 ; flux for stainless steel, 226 ; fume elimination, 340 ; hard facing. *See* Hard Facing ; helium-arc, gases from, 435 ; maintenance, in steelworks, 89 ; metallurgical aspects, 436 ; mild steel, 435 ; mild-steel sheet, 89 ; narrow tubes, 89 ; nickel-clad steels, 89 ; physics of, 339 ; pressure vessels, 226 ; recrystallization, 435 ; research at universities, 340 ; resistance, 339 ; resistance, in tubemaking, 226 ; ship-failures research, 436 ; ship machinery, 435 ; ships, Lloyds activities in, 339 ; ships by thermit process, 339 ; spot, of mild steel, 435 ; spot, of mild-steel sheet, 89 ; stainless steels, 89, 226 ; stainless tubes, 435 ; steel castings, 429 ; structural steel, 435 ; stud, 436 ; submerged-arc with high-manganese fluxes, 88 ; submerged-arc Lincolnweld process, 435 ; submerged-arc low-temperature, 226 ; technology, 351 (*Book*) ; test, C.T.S. method, 435 ; thermit, in shipbuilding, 339; in tubemaking, 226, 340; tubes, defects in, 226 ; with tungsten electrodes, 88 ; wire-feed unit for, 89
Welding Electrodes, for alloy steels, 436 ; alloying-elements transfer, 89 ; austenitic, 339 ; basic-coated, 436 ; Cr–Ni in rolls hard facing, 339 ; for Cr–Ni steel, 435 ; core wires, 435 ; deep-penetration, 339 ; development problems, 339 ; effect on arc atmosphere, 88 ; low-hydrogen, 339 ; for mild steels 436 ; molybdenum-steel, stress relief after, 436 ; rutile- and basic-coated, for rails, 226 ; tungsten, 88 ; wire-feed unit, 89
Welding Machines, resistance, 436 ; Taylor-Winfield, 435
Welds, annealing, in boilers, 433 ; Cr–Ni steel, 339 ; crack testing, 435 ; cracking in Cr–Mn–Si steel, 226 ; cracking,
Welds—*continued*
effect of chromium, 89 ; cracking tests, 343 ; heat-affected zone relationships, 226 ; hot cracking, 339 ; joint bend testing, 89 ; pipe formation in, 435 ; rotor, testing by X-rays, 231 ; spot, strength estimation, 435 ; stress relief, 436 ; stud fatigue strength, 226 ; testing by bead bend, 226 ; testing by X-rays, 226, 231
Western Electric Co., progressive dies, 87
Wheeling Steel Corp., open-hearth firing with coke-oven gas, 80 ; soaking pits, 223
Wheels, machining with carbide tools, 340
White Cast Iron, graphitization, effect of heat rate, 83 ; inoculation for grey iron 429 ; oxygen relations in, 83
Wire, effect of drawing on electrical resistance, 231 ; gauging by interferometry, 338 ; industry development in Warrington, 87 ; Fe–V, nitrogen and anelasticity, 343 ; pickling, 437 ; pickling methods, 437 ; stainless steel, drawing rate, 338 ; stainless steel, magnetic changes, 231 ; untwisting after torsion, 230
Wire Drawing, die profiloscope, 338 ; dies, 338 ; effect on electrical resistance, 231 ; lighting for, 338 ; principles and practice, 338 ; rate effects in stainless steel, 338, 444
Wire Ropes, care and handling, 453
Wood (Alan) Steel Co., waste-water treatment, 237
Woodward Iron Co., conditioned-air blast-furnaces, 78
Wrought Steel, machinability, 89

X-Ray Studies, Al_2O_3–Fe_2O_3–SiO_2 system, 329 ; carbon interstitial position in α-iron, 233 ; cold work, 229 ; coke structure, 76 ; deformation in rolling, 447 ; flake graphite and temper carbon, 233 ; work hardening, 447
X-Rays, absorption spectra, 448 ; analysis, by, 236, 349 ; analysis apparatus, 446; analysis calculations, 446 ; analysis procedures, 446 ; analysis symposium 446 ; fluorescent analysis, 452 ; Geiger counters in, 446 ; reflecting goniometer, 233 ; in rotor-weld testing, 231 ; spectra, 448 ; spectrograph, 448 ; spectroscopy conference, 448 ; in weld testing, 226

Yielding, 231 ; effect of deformation rate, 440 ; plastic, in notched-bar bending 229 ; in single-crystal and polycrystalline metals, 229, 233
Young's Modulus, effect of heat-treatment, 234
Yugoslavia, mining industry, 349

Zinc, analysis by spectrometer, 450 ; corrosion impurities effects, 449 ; corrosion studies, 234 ; liquid, attack on iron, 449 ; liquid, stress cracking in steel by, 450 ; phosphating-bath formulæ, 91
Zinc Coatings, corrosion, 449 ; ductility, 439 ; thickness determination by HCl, 438 ; as undercoat for chromium plating, 438
Zinc Plating, bright, 439 ; electrolytic process, 439 ; practice, 227
Zirconite, moulding sand, 222
Zirconium, vacuum melting, 446
Zirconium Silicate, moulding-sand properties, 222

NAME INDEX
